

Weekly Report #3

Date: 9/14/14

Project Name: Lion Stalking Device

Group Number: 22

Group Members: Rachel Bilski, Quinn Kern Allely, Joshua Wong

Current status of project:

In our last meeting, our group started doing broad research on lion behavior in captivity. At first, we found it difficult to find scientific articles on such a specific topic. So we divided the research. Quinn and Josh contacted other zoos as well as searched online for information about techniques that are currently being used for lion enrichment. Rachel researched more generally the affects captivity has on mammals. We the consolidated and shared the notes from the research.

Work planned for next week:

This coming week, we will continue research and work on and complete the preliminary written report. We will meet on Monday to discuss what needs to be in the preliminary report and how we are going to split the work for the paper.

Anything needed from client or TA or instructor to continue work:

We do not need anything at this point.
